Data and Business Intelligence Senior Developer

Remote - RO, Remote - RO, Iași, Romania Req #2485 Thursday, March 7, 2024

Lead Software Engineer (Big Data Engineer)

This could be the Opportunity of Your Life!

Signant Health is a global evidence generation company. We're helping our customers digitally enable their clinical trial programs, meeting patients where they are, driving change through technology and innovations and reimagining the path to proof.

Working at Signant Health puts you in the very heart of the world's most exciting sector - a high-growth, dynamic company in an extraordinary industry.

Where do you fit in?

We're on the hunt for a new **Lead Software Engineer** for one of our **Technology R&D teams** working on the solution design, systems analysis, and programming activities. The position gives you a great view on how bug verification is performing, on release testing and support for assigned products.

This role will be focused on data management between many company product line source application databases to centralized data lake and warehouse models. The focus is on moving data to this new centralized data and business intelligence platform. Some middle tier development and integration points over central API services to internal and outside partners. This new platform will drive the internal company data capability areas like expanded BI and data science.

Want to join the Best Team of Your Life?

We're looking for people who are excited by the potential to make a difference in the world. You don't need to have a clinical background to thrive at Signant. You need to be decisive, open to celebrating mistakes, able to communicate transparently and inclusively, and someone your team can count on. Most of all you need to be yourself!

As part of our team, your main responsibilities will be to:

Perform design, implementation and maintenance of product modules/sub-systems according to architecture, guidelines and good software engineering practice.

Be responsible for product's usability by designing user interfaces, creating use cases, implementing prototypes and conducting usability tests.

Prepare technical documentation of product, creates user interface guidelines, and conducts reviews.

Perform bug verification, release testing and support for assigned products. Researches problems discovered by validation or product support and develops solutions to the problems.

Research and understands the marketing requirements for a product, including target environment, performance criteria and competitive issues; Researches new technology or development tools to remain abreast of current technology;

Perform code and design reviews to ensure good maintainability and bug free implementation of the product features.

In the absence of the Software Architect, is capable to serve as the software architect in the areas of design and implementation in order to meet project objectives and documentation.

Organize trainings and developer meetings for software engineers regularly; Develops improvements for software designing practices as needed

Conduct unit testing and integration testing.

Lead software developing effort and engages efficient and good co-operation between stakeholders (architects, POs, software designers, validation, product management, customers etc other stakeholders)

Coach and mentors software engineers

Help and train fellow developers to work with new product components / modules, to follow company coding practices and architectural guidelines.

You'll need to bring :

Degree in Computer Science, Engineering or Information Systems.

5+ years of software development experience

Fluency in English, both written and verbal

Significant AWS or Azure cloud development experience

High level of Python proficiency

High level of SQL proficiency

Data ETL/ELT experience from source data systems to central warehouse or data lake

Cloud serverless experience

Nice to have experience :

Snowflake

AWS Glue

Rest based API integration

Kafka messaging

Oracle/SQL Server

Data modeling

OKTA

Desirable:

User-oriented approach to software development;

Willing to expand the skills by learning other technologies as needed;

Important to be a team oriented person with a “can do” attitude.

And finally, here are the ways of working that will help you succeed at Signant:

You enjoy problem-solving and have a constructive can-do attitude.

You're motivated by working in a fast-growing global company.

You're self-driven, active and want to continuously learn new things.

You have great communication skills in English, both spoken and written, and can articulate technical details succinctly.

You like to share knowledge as a way to advance organisational learning.

Summary

Build High level technical design both for Streaming and batch processing systems

Design and build reusable components, frameworks and libraries at scale to support analytics data products

Perform POCs on new technology, architecture patterns

Design and implement product features in collaboration with business and Technology stakeholders

Anticipate, identify, and solve issues concerning data management to improve data quality

Clean, prepare and optimize data at scale for ingestion and consumption

Drive the implementation of new data management projects and re-structure of the current data architecture

Implement complex automated workflows and routines using workflow scheduling tools

Build continuous integration, test-driven development and production deployment frameworks

Drive collaborative reviews of design, code, test plans and dataset implementation performed by other data engineers in support of maintaining data engineering standards

Analyze and profile data for the purpose of designing scalable solutions

Troubleshoot complex data issues and perform root cause analysis to proactively resolve product and operational issues

Partner closely with product management to understand business requirements, breakdown Epics

Does this sound like something you'd like to explore? Then we'd love to hear from you!
